

## Install and Boot

### 1. Instructions for use

The correct use of the product steps:  
Install > Boot > Activate online

### 2. Install the SIM card

In the off state, insert the SIM card into the card slot in the direction of marking.

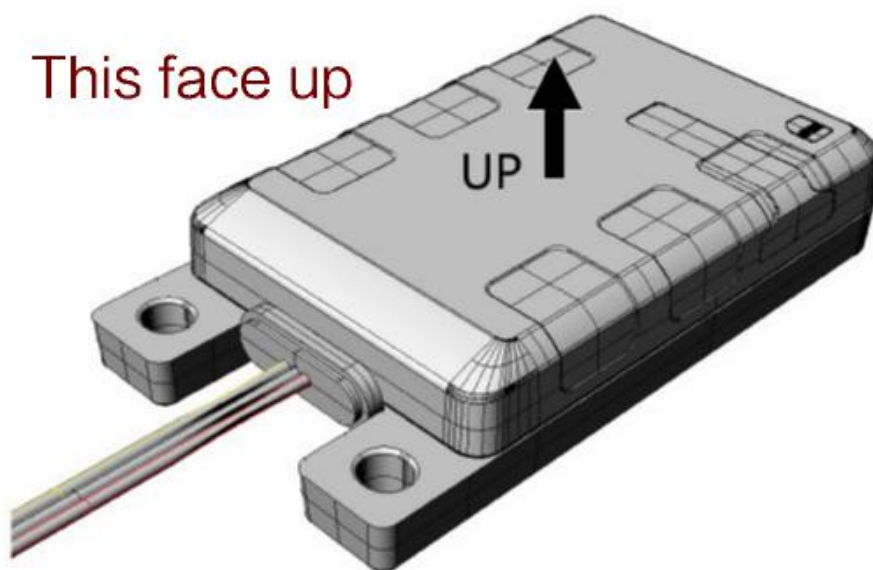

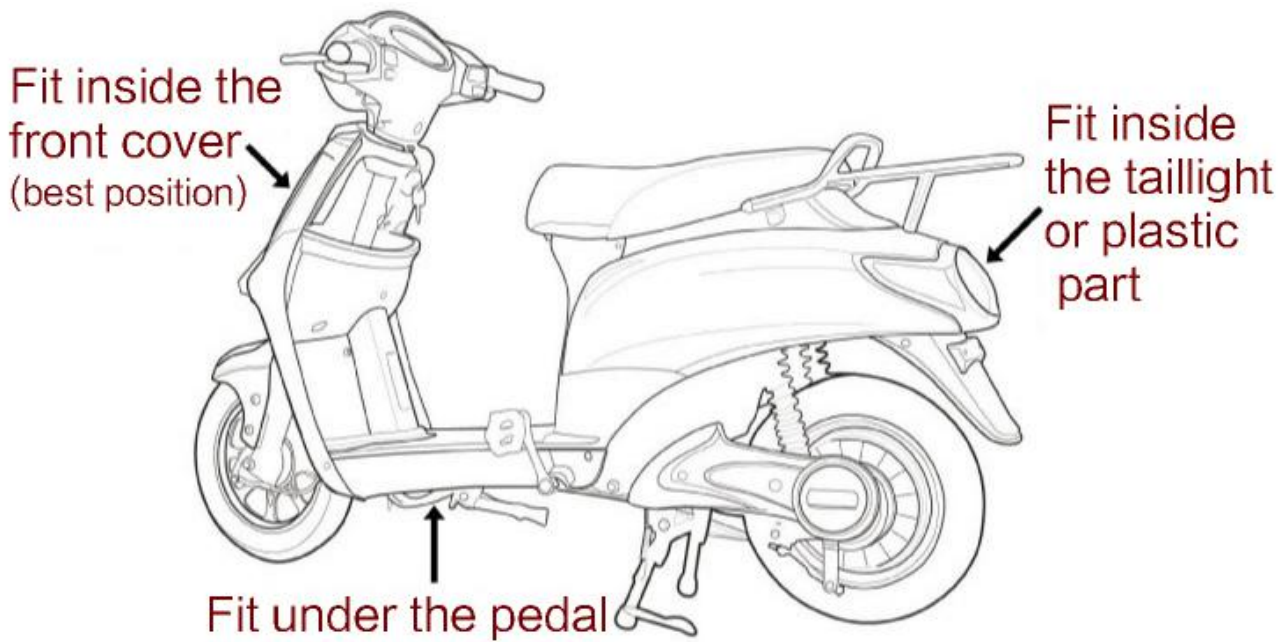

### 3. Install and fixed host

The host is recommended to be installed and fixed by designated dealers or professional installers. And pay attention to the following:

- (1) To avoid theft damage, the host installation should be as concealed as possible.

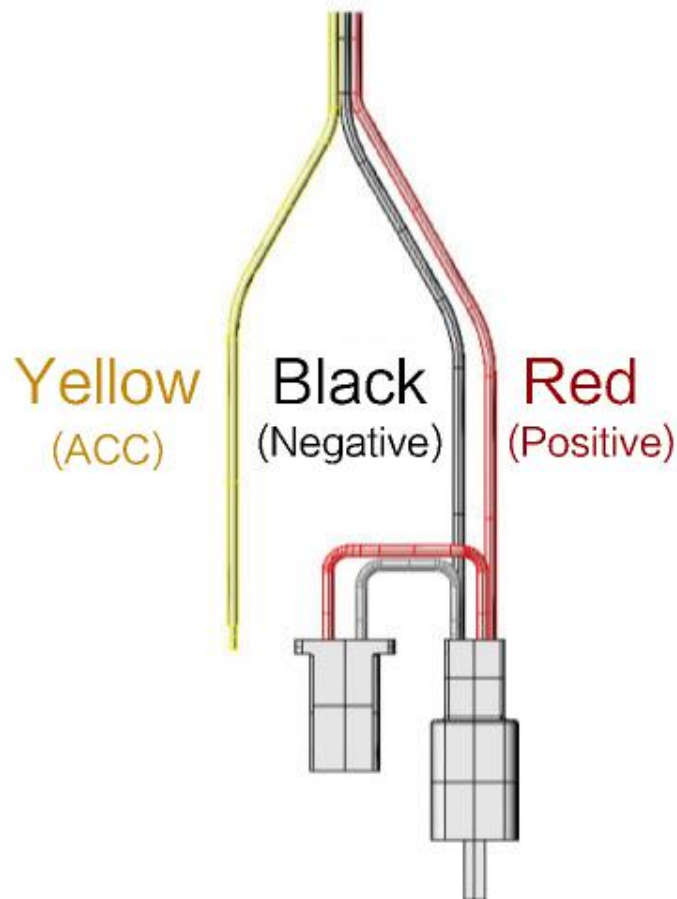

- (2) Avoid being put together with the launch source, such as car communication equipment.
- (3) Avoid high temperature, high humidity environment.
- (4) Fixed with screws or band in the right position.
- (5) Because the built-in GPS antenna has the direction, make sure the front side (with the indicator light) faces up when the host is installed.
- (6) The installation position must avoid metal objects, but also avoid the human body occlusion, such as under the seat cushion.

#### 4. Install the power cord

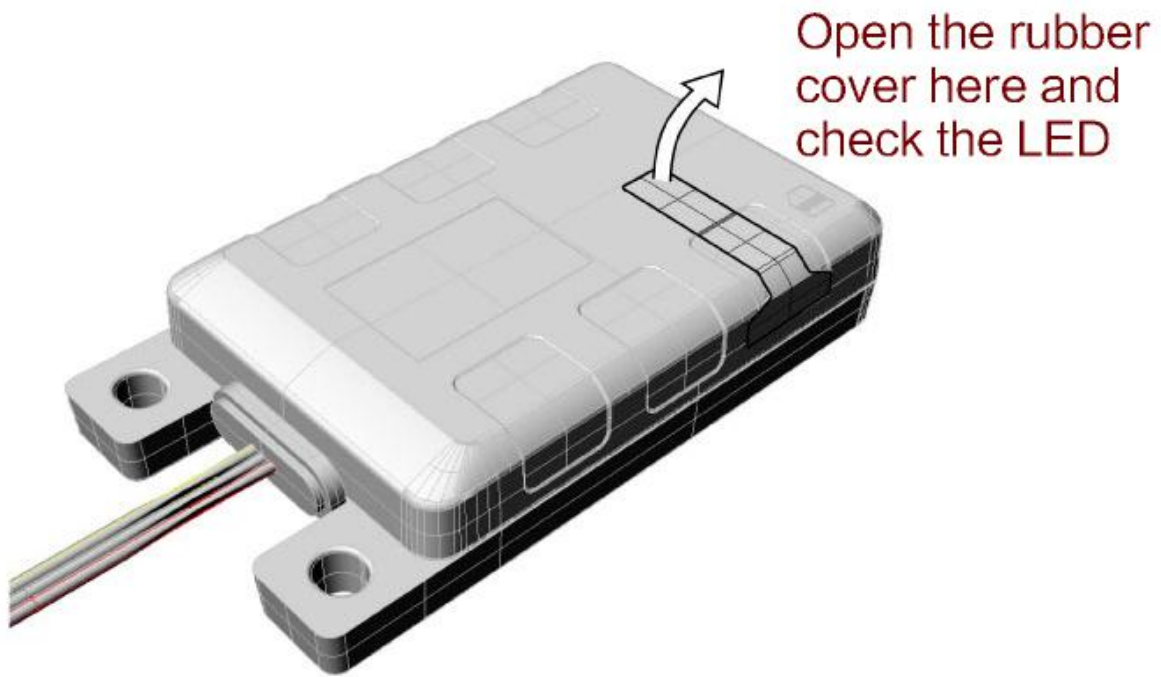

- (1) This product supports the voltage range: 12V–72V. Red line for the power supply positive, black line for the power supply negative, yellow line for the ACC line.
- (2) The power line must be connected to the constant power.
- (3) The negative pole of the power supply should be grounded separately. Do not connect with other ground wires.
- (4) The ACC line is connected to the output end of the electric door lock switch (Open the key, the output voltage of the electric door lock is basically the same as the battery voltage. Close key, the electric door lock is no voltage output).

## 5. Boot

When the device is connected to the vehicle power supply, the blue light will be turned on to indicate the power on.

After the boot, the device will search the GSM signal (LED fast flashing) and GPS signal (LED slow flashing) in turn. When the device is ready, the LED will be always bright. It will go to sleep when the device is stationary for a long time, at this point the LED is off.

## APP usage

### 1. Download and install the APP client

We provide users with a dedicated mobile phone APP. Use the mobile phone to scan the following two-dimensional code can be downloaded. Detailed instructions can be obtained in help

(Scan this QR code to download APP)

## 2. Registration and login

The APP client supports two login modes:

(1) Log in using the device number and device password.

Note: contact the dealer or administrator to activate the device before login.

(2) Log in using your mobile phone number and your mobile phone login password.

Note: you need to register your mobile phone number before you log in.

You can bind your device to your account after logging in. The binding process requires you to provide the device number and device password.

## 3. Location query and other operations

After login, click the corresponding button, you can query the location of the vehicle, track playback, parameter settings, remote control and other operations. Detailed instructions can be obtained in the help.

## **Device activation method**

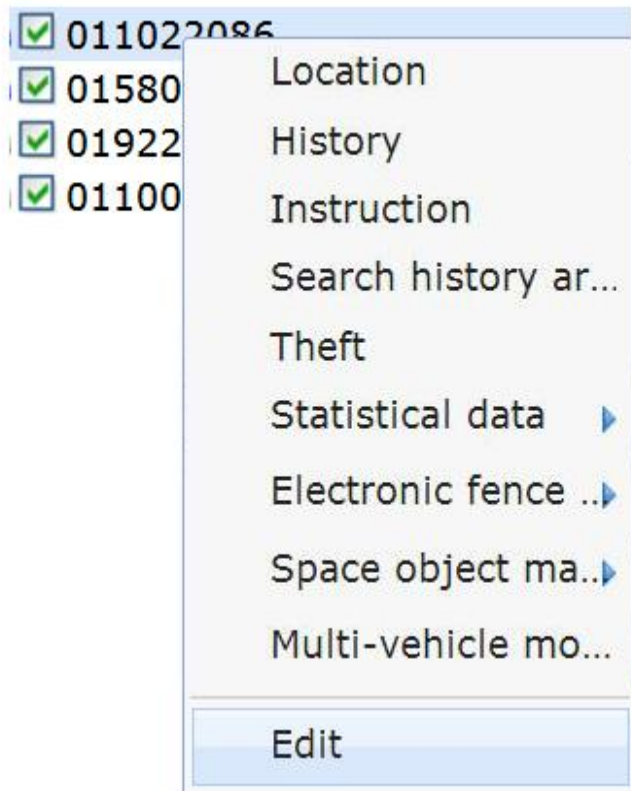

Before using the device, you need to activate the device first, otherwise you cannot login to the APP client. The device supports two activation modes: self activation and administrator activation.

### (1) Self activation

Some products can be self activated. Log in to the APP using the registered user account and bind the device number using the device number and device password. The device password is generally [123456](#); some devices are shipped with a device random password label. For your information security, please login and change the password in the first time.

### (2) Administrator activation

By dealer or administrator, use the team administrator account login [gpslink.cn](#). After searching the device number, right click "Edit". Enter the owner's mobile number in the "Edit information of Equipments" bar, and enter the service deadline in the "End Time" bar.
